CABRINHA

JAMES BOULDING / SWITCHBLADE / CBL

P. Cabrinha

Progress is often a slow burning flame that provides fuel for our imagination and inspiration for our sport. This year marks the 10th edition of the kite that ushered in the era of performance kiting. The Switchblade is the cornerstone of the freeride movement that continues to blur the lines of possibilities with a kite. The ten year process of refinement has resulted in a crossover kite capable of exceptional performance regardless of the board and discipline you prefer. Its DNA is passed along to its younger siblings like the all new Radar crossover kite.

Providing progressive kiteboarding solutions for all areas of our unique sport is also the driving force behind our board program. 2015 brings you an all new quiver of enhanced durability surfboards and a wide range of progressing twin tips. It's our commitment to put the absolute best products in the hands of our customers. To do this, we constantly test new ideas using the most advanced technologies and materials available. We evolve by pushing our processes in new directions. One of the most important examples of innovation this season can be seen in our long awaited Quickloop opening harness loop connection. Quickloop has quickly earned the seat as the fastest resetting loop system on the market. Our experienced crew is dedicated to progress. That slow burning flame just became a bonfire. Hope to see you on the water!

- + STABLE ARC DESIGN
- + HUGE LOFTY JUMPS

C-SHAPE KITE **ADVANTAGES**

- + FAST TURNING
- + POWERFUL UNHOOKED
- + KITE LOOPING

Double Ripstop

Developed specifically for kitesurfing. Highly durable and low stretch in warp and weft. Excellent recovery on the bias. All Cabrinha kites are 100% 2DR Double Ripstop.

SPRINT Airlock Valve

Single point rapid inflation of the kite. The large one-way airlock valve quickly feeds air into all of the struts from a single location. It connects directly to the hose eliminating the need for an adapter. Once inflated you can lock off each strut independently.

Modern Craftsmanship

Kites are carefully constructed by hand using the most cutting edge technologies and materials available today. The secret to our ultra durable construction lies in the experience gained building the world's best kites for over a decade.

Dynamic Arc

A dynamic arc allows the kite to have two distinct arc shapes. Tighter arc in flight for faster turning. Opens wide on the water for faster relaunch.

Power Control Pigtails

Quickly adjust the power level of the kite. Each rear line "pig tail" connector has three power positions which you can connect to. The middle position is the factory recommended position. Create more power by connecting the knot closest to the kite or less power by connecting to the knot closest to the rider.

Skeletal Frame

All Cabrinha kites are designed and built on a skeletal frame foundation. Skeletal frame technology allows us to make a lighter more durable kite by strategically placing the reinforcement weight materials into a framework that surrounds the lighter weight canopy materials.

SWITCHBLADE

PERFORMANCE FREERIDE / CROSSOVER

After ten years of refinement, the Switchblade kite from Cabrinha is held as the benchmark for which all crossover/freeride kites must aspire to. Its success lies in its uncommon blend of high performance and ease of use. The Switchblade will easily crossover from freeriding to freestyle to surf on any given day. The common element in each of these riding styles is precise handling; and this is where the Switchblade shines. The Switchblade provides maximum control with a light bar touch. The SB's high performance profiles deliver the power needed in light winds and the ability to dump the power in strong winds. This gives the SB the type of range needed to extend your sessions when the winds are up and down. The five strut design holds the canopy true to its shape regardless of the wind condition or angle of attack.

RIDER PROFILE: The discerning rider who will crossover from freeriding to freestyle to surf on any given day. High performance, versatility, and build quality are at the top of their list.

Why You'll Love It

Most versatile performance kite

5 struts for standout stability and performance

Enhanced profiles optimize the low end power

NEW FOR 2015

- + Bridle refinements for improved flight stability and agility.
- + New strut to leading edge connection.
- + New rounded LE end closures ensure a true finish without deformation.
- + Extra long 30cm 2-ply on the leading edge bladder ends.
- + Refined panel orientation
- + New "Absolute mirror" construction ensures the kite flies straight and true to the design.

RADAR

VERSATILE FREERIDE / CROSSOVER

The all new Radar kite intelligently combines raw performance with absolute simplicity. The Radar is a performance three strut kite with a park and ride power source. Any input given to the control system translates into an immediate response from the kite. The Radar is a full bodied, swept wing kite, meaning that you will not find an easier kite to relaunch when the kite hits the water. The generously curved leading edge makes the kite roll into the relaunch position with very little input from the rider. The Radar excels as a crossover kite with legit skills in freeriding, freestyle, and surfing.

RIDER PROFILE: Riders who want a simple to use, crossover performance kite with incredible relaunch capabilities..

Why You'll Love It

Versatile crossover kite

Scaleable performance

Designed to maximize progression

Three strut simplicity

Swept leading edge for stability

Best relaunching kite to date

Fast Relaunch

The curved nose shape allows the Radar kite to rock onto its side and relaunch quickly and easily.

CONTRA

PERFORMANCE LIGHTWIND

The Contra performance light wind kite is specially designed to maximize the kite's power production in light winds. The Contra is designed to be a light wind extension to any kite in our range. The Contra delivers distinctly sharp and precise turning that makes generating power and speed a snap, while maintaining the agility of a smaller kite. It's this type of performance that has widened the scope of what is possible in light winds. Whether you are riding freestyle, wakestyle, surf or just burning around, the Contra has the muscle to get you up and riding when the winds are barely showing signs on the water.

RIDER PROFILE: For riders looking to extend their game into the light wind arena.

Why You'll Love It

Designed to be a lightwind extension to any kite in your quiver

Fun to fly in lightwind conditions

Enhanced profiles optimize the low end power

Direct feel with great response

Fast turning for lightwind performance

Optimized lightwind construction

DRIFTER

SURFING

The Drifter surf kite is a kite with a purpose. This kite is dead set on being there for you when you need it and getting out of the way when you don't. You see, kite surfing is an act of taking power from the kite when you need it and dumping the power altogether when you don't. This high depower kite allows the rider to drop in, accelerate, then dump the power completely to snap or carve their turns. It delivers a perfect blend of the best elements of surfing and kitesurfing. The Drifter's special design allows it to drift downwind and stay aloft even when the lines are slackened. This phenomenon, first developed by Cabrinha is known as drift stability.

RIDER PROFILE: Specially designed to be the absolute best kite for surfing and surf freestyle.

Why You'll Love It

Podium proven surf performance

Slack line drift

Crazy fast turning speed

High depower

Moderate arc shape

Direct steering

Fast relaunch

Works in a wide range of conditions

COLOR 2

COLOR 3

SLACKLINE DRIFT

While surfing it's sometimes important to depower the kite to the point where you can surf on your own wave generated power without the pull of the kite. It's here that the Drifter is able to stay aloft and drift downwind with you. When the time calls for it, you can immediately power up the kite and make the next section.

CHAOS

FREESTYLE / WAKESTYLE

The Chaos freestyle kite is a highly technical freestyle / wakestyle kite capable of winning world class freestyle competitions. Everything put into this design is aimed at performing at the highest level of freestyle. This high aspect C shape is exactly what is needed for bursts of speed and the ability for the lines to slacken when unhooked. With the Chaos, you can throw a kite loop with the tightest arc possible, and the kite will hit the zenith with plenty of time to cushion your landing.

Rider Profile: *The highest performing technical freestyle kite*

Why You'll Love It

Podium proven competition performance

C-Shape arc for excellent freestyle and wakestyle performance

Engineered specifically for unhooked tricks

Carries power through turns for massive kiteloops

High aspect forward sitting kite that edges out well

Direct Steering

Tuned profiles to quickly generate board speed

KITE TECH

K05CHA0SK

VELOCITY

FREERIDE / RACE

The Velocity is our most efficient performance freeride/ race kite. The Velocity's ultra high performance comes from a combination of its high aspect outline, flatter arc, and high performance profiles. This delivers the most power per square meter of any kite in our range. It is perfect for boosting huge jumps or racing around a course.

Rider Profile: Designed for riders who want the ultimate power source for racing or high end freeriding.

Why You'll Love It

Podium proven race performance

True bow kite optimized for efficiency

High speed profiles

High aspect ratio for optimum upwind performance

Huge wind range

Thin bridling with no pulleys on the front lines

Light weight construction

Rides trim with relatively low rear line tension.

IKA registered.

K05VLOCTY

GENESIS

LEARNING / SIZE 2.0

The Genesis kite is a scaled down no strut inflatable kite designed to teach a student how to operate a fully functioning 4 line kite. The Genesis kite allows a rider to learn real world techniques of water launching an inflatable kite by pulling on the left or right leader lines. It will also teach a rider the important technique of operating a 1X security system. Since the Genesis is designed to be used with a standard Overdrive control system, the student will be familiar with all the control and security features by the time they get on the water for their first lesson.

WHY YOU'LL LOVE IT

No struts

Simulates interactive depower

Water relaunch

Depower

Compatible with Overdrive 1x Security & control system / bar not included

KITE TECH

K05GENSIS

SPARK

LEARNING / SIZE 2.0

The spark is designed to give you the kite flying skills you need to begin your kiteboarding adventures. The 2 meter trainer is ideal for someone wanting to safely learn the basics.

Why You'll Love It

Ram air design - no inflation needed

Heavy duty nylon canopy material

Two line bridle

Reinforced cell structure

Stable, forgiving flight characteristics

Color coded wing tips

CONTROL SYSTEM

OVERDRIVE 1X
CONTROL & SECURITY SYSTEM WITH QUICKLOOP

OVERDRIVE 1X

CONTROL & SECURITY SYSTEM WITH QUICKLOOP

ADJUSTABLE BAR

The 2015 Overdrive 1X QuickLoop™ control system is a fully adjustable control bar featuring our all new QuickLoop™ opening harness loop. QuickLoop™ is an opening harness loop connection designed to work specifically with our 1X single line flagging security system. QuickLoop's™ defining feature is its ridiculously simple operation of our 1X security system. Upon activation of 1X's single line flagging system the power of a kite is immediately killed and it will rest motionless on the water or land. The incredibly easy reconnection of the QuickLoop™ harness loop is now the new benchmark in the industry for simplicity. The all new Overdrive 1X security system now has a cleaner method to manage the 1X security line. We have removed the external 8meters of security line to create a simplified lower V connection. The 1X line stopper is integrated into the centerline adjustment strap.

Why You'll Love it

QUICKLOOP

NEW 2015

QUICK & EASY RESET

"FASTEST RELOAD ON THE MARKET!"

QuickLoop's™ defining feature is its ridiculously simple operation of our 1X security system. Upon activation of 1X's single line flagging system the kite's power is immediately killed and it will rest motionless on the water or land. The incredibly easy reconnection of the QuickLoop™ harness loop is now the new benchmark in the industry for simplicity.

To reconnect, simply push the open end of the loop into place and the latch will automatically engage the loop.

Dropping the QR body back down secures the loop back into place.

1

2

3

OVERDRIVE 1X

CONTROL & SECURITY SYSTEM WITH QUICKLOOP

OPENING LOOP QR

The main QR is a push away release with a catch that holds the QR in the released position until you are ready to reconnect. The main QR meets the AFNOR standards for release loads.

Centralized flagging line connection point
Ensures tangle free leash during rotations. Swiveling connection also helps to avoid flagging line twists.

Multi bore tubing protection system
Dual chamber PU tubing houses and protects the 1X security line and the depower mainline.

Spinning handle
Ultimate control for unwinding front line twists. Indexed top piece allows advanced riders to easily hook back in without removing their hands from the bar.

Push away quick release
Industry standard QR system gives full confidence for reliable activation in all conditions.

Removable centralized security pin.

Comprehensive safety
New safety feature allows for QR1 activation even with bar fully sheeted in.

DEPOWER ON DEMAND

INDUSTRY LEADING DEPOWER

DEPOWER ON DEMAND PROVIDES MORE DEPOWER
THAN ANY OTHER KITE ON THE MARKET

Cabrinha kites introduced Depower on Demand in 2005 along with our revolutionary Crossbow kite. Even today, every Cabrinha kite incorporates Depower on Demand as the default method to precisely control the power of a kite.

OVERDRIVE 1X

BAR TECH

Overdrive

The bar ends can change the length of your bar from its standard mode of 49cm, to the Overdrive mode of 57 cm in seconds. The Overdrive mode will increase the turning speed and performance of any kite large or small.

1X Security System

The 1X is not a depower system, it is a full blown shut down system. The 1X relies on only one line to immediately shut down the power of the kite whether it be on land or water in all wind conditions.

Recoil

Recoil keeps your trim adjusters in the same position every time. Even after you've depowered your kite, Recoil will return the trim adjusters to the exact same position for easy operation. The spring has been extended and is now closer to the rider on all bars.

Internalized Lines

The protective PU tube allows us to run the depower mainline and the 1X landing line through the center of the bar without the risk of abrasion or tangling.

Low V

We have lowered the front line connection to the CAS in order to provide a more direct and immediate response from your bar input.

New ergonomic floating bar ends

We have increased the length of the bar ends to provide protection from line wrapping, and to help in floatation.

PARABOLIC RAILS

The Parabolic Rail provides a stiffer center section while delivering a more responsive tip and tail flex. Found on the Ace, Custom and Tronic

HEX FLOW GFN FINS

Our unique Hex Flow fins feature a hexagon dimpled pattern over the surface of the fin. The hex pattern helps to create a boundary layer which assists in the laminar flow over the fin.

VOLCANIC BASALT

Basalt is a natural volcanic fiber which offers vibration resistance and durability while maintaining a high strength to weight ratio. Naturally produced absent of toxic additives. The combination of wood core, with basalt laminate provides a flex characteristic which is unique to Cabrinha.

XCALIBER

ALBERTO RONDINA SIGNATURE MODEL

FREESTYLE

The XCaliber is our competition freestyle pro model. Designed together with PKRA star, Alby Rondina, the XCaliber is designed to provide quick bursts of speed, incredible pop, and the upwind ability to keep your performance right in the box. The pop comes from our wood core and full carbon laminate. The extensive use of carbon allows this board to be our lightest, most technical twin tip.

Why You'll Love It

Designed with PKRA star Alby Rondina

High reflex double bias carbon construction

Explosive pop

Excellent upwind drive

Stable high speed landings

40mm GFN Hex flow fins

Rider Profile

A premium competition freestyle board designed for the high end competitor.

QUAD CONCAVE BOTTOM SHAPE

PARABOLIC RAIL

CUSTOM

FREESTYLE / WAKESTYLE

If your brand of riding leans toward throwing wakestyle tricks on the flats, the Custom would do you right. The Custom is a refined ride from many years of development in the wakestyle arena. The result is a board with pure wakestyle performance and surprisingly great upwind ability. All together this produces an incredibly smooth ride even in tight chop. The Custom is built with our winning combo of a Parabolic Rail™ and basalt laminate construction. The Parabolic Rail™ provides a stiffer center section while delivering a more responsive tip and tail flex and keeping the board weight to a minimum.

Why You'll Love It

Turns choppy water into your personal skate park

Excellent power control

Easy landings

Huge pop

Works well with straps or boots

Moderate rocker line

Firm flex

Outline hipped/ pulled in curve for power control

Double concave with center V and raised fin panels

4x 30mm Hex flow GFN Fins

XO SUSI MAI SIGNATURE MODEL

WOMEN'S FREESTYLE / FREERIDE

The XO Susi Mai signature model is inspired by the one and only Susi Mai. As a leader in performance riding and a role model for many, it was an easy task to create a board suited to her needs and the needs of the growing population of women in kiteboarding. Our approach to developing the XO was to start from scratch and engineer this board from the ground up. The result is a performance freestyle model with a soft, responsive flex. Details like appropriate sizes and widths, narrower stance options, and lighter weights all make this board the ideal choice for women of all levels.

Why You'll Love It

Light weight basalt laminate construction

Women specific flex pattern

Smooth ride in a variety of conditions

TRONIC

FREESTYLE / FREERIDE / BIG AIR / WAVE

The Tronic is back this season as our freeride/freestyle twin that loves to get huge air. This year it gets an upgrade in design and construction, implementing our Parabolic Rail™ shape and a basalt laminate construction. With a softer curved tip and tail and a rounded and tucked rail, the Tronic tames choppy water and can redirect itself on a dime. The bottom contour is a quad concave to deep V to cut through any chop. The Parabolic Rail provides a stiffer center section while delivering a more responsive tip and tail flex.

Why You'll Love It

Light weight basalt fiber construction

Rounded tucked rail shape

Parabolic Rails™

Chop killer

Smooth ride in a variety of conditions

STYLUS

LIGHTWIND FREERIDE / RACING

COLLECTION

The Stylus is made to perform in the fickle conditions known as threshold winds. Threshold winds are generally thermal breezes with wind speeds just strong enough to fly a kite. The flat rocker line and extra wide outline make the most of these less than ideal wind conditions. In many cases, the Stylus twin tip will be the difference between sitting on the beach or getting a full kiteboarding session.

Why You'll Love It

Excellent performance in light wind

Extra wide outline for early planing

Wide range of use

Excellent upwind ability

30mm GFN Hex flow fin

Rider Profile:

The Stylus is specially designed for the rider who wants to ride a twin tip in the lightest wind possible.

CODE / KB50STYLS

H3

JAMES BOULDING / CBL / H3

BINDINGS

H1 HYDRA SERIES

The H1 is a one strap asymmetrical body shape which provides a positive fit for the rider looking for board control with ease of use. The H1 is supportive yet lightweight and flexible. The H1 can be used for all types of twin tip riding from freestyle to freeriding. The H1 attaches to the board with minimal effort and allows for multiple stance options with duck and heel toe offset option. It sits on a super cushy footpad with arch support, toe grips, and generous heel coverage.

Why You'll Love It

Single adjusting velcro strap

New pad shape for a smooth comfortable ride while providing lots of grip

Triple position duck adjustment for personalized stance

Available in both small and standard sizes

Industry standard 6" Mounting Pattern

SIZE	CODE
STANDARD	KB5H1FSLG
SMALL	KB5H1FSSM

H² HYDRA SERIES

The H2 steps up the connection equation with a two strap, wide body backless binding. The H2's wider base and fuller coverage cradles the foot for more control and precision to create as much edge pressure as you need when busting huge freestyle tricks. The H2's tunable, ultra soft footbed create a perfect landing pad to keep your heels intact when dropping from the sky.

WHY YOU'LL LOVE IT:

New floating tongue to accommodate a larger range of sizes.

Two quick adjusting velcro straps provide full coverage for a locked in connection with positive edge engagement.

Triple density pad designed for a smooth comfortable ride, while providing grip, and impact resistance.

Customizable heel pad inserts to tune your ride to hard and responsive, or soft and comfortable.

Triple position duck adjustments for a personalized stance.

Industry standard 6" mounting pattern.

M6x16 stainless steel mounting hardware included

Cabrinha multi tool

LIGHTWEIGHT CLOSED TOE BINDINGS

Designed for kilters with easy velcro entry & exit. Ultra-lightweight outer shell, and a lower profile upper section designed for more lateral movement without sacrificing support. Other features include Neoprene flex zones for flexibility, closed toe design to reduce cramping and improve fit and lightweight nylon baseless chassis to give you a solid board feel with maximum impact absorption.

Surfboards

Designed by Pete Cabrinha

This season we offer an all new range of surfboards to cover a much wider range of conditions. The most important changes have been made in the areas of width, volume, and construction. Wider widths and higher volumes have been implemented in the area most needed. Each board in the range is very different from the other which presents a completely different surfing or freestyle experience with each model.

General Rules

Length is the first place to start when choosing a board. A general rule for choosing a kite board is to ride a board which is approximately 2-3 inches smaller than your height.

Width of a board helps determine the volume as well as how much curve the board's outline will have. Wider boards generally have more curve (as well as more volume). Wider boards are lively under your feet, especially in lighter winds or smaller waves.

Volume is an important factor when choosing a board. Volume is made up of a combination of length, width, and the board's thickness. Volume is an important element, especially in lighter winds and smaller waves. However, when the wind is strong and the waves are bigger, too much volume will work against you.

Bamboo + Cork Construction

All 2015 surfboards are constructed with our ultra durable Basalt + Cork sandwich layup. The basalt sandwich construction features a super light EPS core and bamboo reinforcement layer on both the top and bottom of the board.

Pod Pads

Strategically placed hex shaped pods of EVA cover only the most crucial section of the board to allow easy repositioning of your feet. The hex pads are hollow to reduce weight.

This season we bring you an all new fin design in two constructions

Hex Core RTM fins Premium

Made with a hex core and glass, this fin has a stiffer base and a moderately soft tip. The hex core fin provides excellent drive.

GFN FINS Standard

Our Glass filled nylon (GFN) fins offer a more affordable yet durable fin option. They have a slightly softer flex throughout the entire fin which translates into a dampened ride, especially in choppy waters.

NEW 2015

PHENOM

KEAHI DE ABOITIZ
SIGNATURE MODEL

The Phenom takes a step towards the performance end of the surf chain while keeping its easy to ride characteristics. The Phenom is our widest board with the highest volume. The combination of width and volume makes this board extremely versatile in the surf as well as the flat water freestyle arena. The Phenom is developed with our two time KSP World Champion, Keahi De Aboitiz. Its 5 fin box configuration allows the rider to choose just about any fin set-up they like.

Why You'll Love It

Works well in any wave size

Customizable 5 fin box

Perfect amount of volume and width for light wind

More surface area for freestyle tricks

Custom cut hex pod pads

Rider Profile:

Ideal for riders who are looking for a high performance surfboard with volume and trick riding capability.

NEW 2015

PROTO

REO STEVENS SIGNATURE MODEL

The Proto Reo Stevens pro model is our advanced surfboard model. The shape lends itself to stronger winds and side shore surf conditions. The Proto is capable of surfing larger waves than the Phenom or Secret Weapon. This 3 fin model is ideal for down the line, side shore surfing. Its narrower outline and straighter rail shape is perfect for pushing turns at higher speeds. Yet, the generous use of rocker makes the board loose and snappy off the top.

Why You'll Love It

Smooth and drivey bottom turns with just the right amount of release

Single to double concave bottom

Wider nose offers lift under your front foot for freestyle tricks

Thruster fin set up

Custom cut hex pod pads

Rider Profile:

Excels in side shore, down the line surf.

Tech

5'7"	18.9"	2.1"	23.2L	KB50PR057
5'10"	19.2"	2.2"	25.7L	KB50PR051

NEW 2015

The secret weapon is a modern spin on a retro-surf design. The rounded nose and wide tail make this board extremely friendly to ride in real world conditions. It is fast and lively on waves of any size. The aggressive swallow tail and quad fin configuration gives this board its edge and attitude. The Secret Weapon is excellent at making the most out of sub-par wind and surf conditions. Even when the surf is flat, the Secret Weapon becomes the ideal board to throw down your freestyle game.

Why You'll Love It

Excellent surf / freestyle design

Single to double concave bottom

Wide bottom surface area for early planing and lively feel in surf

Quad fin drive

Custom cut hex pod pads

Rider Profile:

Ideal for riders who surf in various conditions and also need a board for flat water freestyle tricks.

ALIAS

LIGHTWIND FREERIDE

The Alias is a super efficient light wind board with no limit to its performance or usage. The Alias, when combined with our Contra light wind kite, can have you flying across the water in well under 10 knots. The hybrid design is a combination of a race board and freeride directional; you get the best of both worlds in one board. The Alias, with its three fins will get you upwind in seconds. Once pointed off the wind, the Alias becomes one of the best downwind models for speed and maneuverability. It comes with a swept bi-elliptical tri-fin set.

Why You'll Love It

Increases the bottom end wind range of any kite quiver

Excellent light wind performance

Excellent for distance and downwinders

Internal grab handle

Ultralight adjustable footstraps

New 3 GFK fin configuration

Rider Profile

A high volume directional board for light wind cruising, downwinders, or all round freeriding.

BOARD SPARE PARTS

TWINTIP FINS -GFN HEX FLOW FINS

Our unique GFN hex flow fins feature a hexagon dimpled pattern over the surface of the fin. The hex pattern helps to create a boundary layer which assists in the laminar flow over the fin, reducing drag. The new GFN material is a lightweight and resilient material.

SIZE		CODE
50mm GFN HEX FLOW FINS WITH M6 SCREWS AND DOGBONE WASHERS	x4pcs fins, 16mm fin screws x8pcs, dogbone washers x4pcs	KF5ATTF50
40mm GFN HEX FLOW FINS WITH M6 SCREWS AND DOGBONE WASHERS	x4pcs fins, 16mm fin screws x8pcs, dogbone washers x4pcs	KF5ATTF40
30mm GFN HEX FLOW FINS WITH M6 SCREWS AND DOGBONE WASHERS	x4pcs fins, 16mm fin screws x8pcs, dogbone washers x4pcs	KF5ATTF30
20mm GFN HEX FLOW FINS WITH M6 SCREWS AND DOGBONE WASHERS	x4pcs fins, 16mm fin screws x8pcs, dogbone washers x4pcs	KF5ATTF20

SURF / RACE / ALIAS FINS

This season we bring you an all new fin design in two performance / construction options.

1. Hex core. Our high performance fin is made with a hex core and glass. This fin has a stiffer base and a moderately soft tip. The hex core fin provides excellent drive.
2. Fiber filled plastic. Our fiber filled plastic fins offer a more affordable yet durable fin option. The fiber filled fins have a slightly softer flex throughout the entire fin which translates into a dampened ride, especially in choppy waters.

GFN - GLASS FILLED NYLON		CODE
PENTA FIN SET GFN (CAN USE ON PHENOM)	x2pcs front fins 4.5" & x2pcs rear fins 4.0" & x1pc rear middle 4.25"	KS55FINGF

H1 STRAPS

The H1 is a one strap asymmetrical body shape which provides a positive fit for the rider looking for board control with ease of use. The H1 is supportive yet lightweight and flexible. The H1 can be used for all types of twin tip riding from freestyle to freeriding. The H1 attaches to the board with minimal effort and allows for multiple stance options with duck and heel toe offset options. It sits on a super cushy footpad with arch support, toe grips, and generous heel coverage.

DESCRIPTION		CODE
H1 FOOT STRAP UPPER - STANDARD	x2pcs straps	KA5H1FSUL
H1 FOOT STRAP UPPER - SMALL	x2pcs straps	KA5H1FSUS
H1 FOOT STRAP UPPER - SMALL SIREN	x2pcs straps	KA5H1FSUR

H1 CHASSIS WITH FOOT PAD - SMALL	x2pcs	KA5H1FPSM
H1 MOUNTING TABS	x4pcs, x4 screws	KA5H1MTAB

H2 STRAPS

The H2 steps up the connection equation with a two strap, wide body backless binding. The H2's wider base and fuller coverage cradles the foot for more control and precision to create as much edge pressure as you need when busting huge freestyle tricks. The H2's tunable, ultra soft footbed create a perfect landing pad to keep your heels intact when dropping from the sky.

DESCRIPTION		CODE
H2 UPPER STANDARD	x2pcs, x8pcs screws	KA5H2UPFL
H2 UPPER SMALL	x2pcs, x8pcs screws	KA5H2UPFS
H2 CHASSIS STANDARD WITH PADS	x2pcs, x4pcs EVA inserts, x4pcs 6x16mm screws	KA5H2CHDL
